

LD110

220V Single Ch Loop Detector "110B"

- Inductive Loop Vehicle Detector is mainly used to detect the existence and passing of vehicles.
- Reduce error rate after multiple measurements
- AC220v Vehicle Inductive Detector uses reset switch to enable the detector to re-tuning the sensing loop and becoming ready for vehicle detection.
- 2.5W Vehicle Inductive Loop has 3 levels sensitivity adjustment, high, medium and low.
- You can adjust the sensitivity according to the actual situation.
- Internal circuit adopts high quality electronic components, with stable performance. which can give you a superior using effect
- 100kHz Vehicle Loop Detector is widely used in parking lots of shopping malls, hotels, company, residence, etc.
