

RR04

AV RECEVIER 4CH

- It adopts an advanced wireless transmission scheme and has the advantages of a long transmission range, anti-interference and high mobility.
- It can receive AV signals at distant end and input them to
- Receiving frequency: ISM 2,414-2,468 MHz 4 frequency(2414MHZ /2432MHZ /2450MHZ /2468MHz) .
- Automatic cycle surveillance, selectable cycle channel and time
- Please attation :The receiver can't work with 2.4GHZ wireless digital signal camera or transmitter ,it's only work with 2.4GHZ wireless Analog Signal camera or transmittter.
- The transmit distance is de
- Digital camera or Digital transmitter, please don?t buy it , because it can?t work with digital signal camera or transmitter .
- If Camera or Transmitter frequency is not 2,414-2,468 MHz 4 frequency(24
