

USMA

U.FI to SMA- Female Adapter Cable 150MM

- This RF adapter cable is super handy for anyone doing RF work
- Often times, small electronics save space by having a pick-and-placeable u.FL connector (also called uFL, IPEX, IPAX, IPX, MHF, and AM).
- But most antennas have SMA or RP-SMA connectors on them. This little cable will bridge the two!
- This cable is RG178 and is 20cm (7.9") long not including the RP-SMA connector
- It has a panel-mount RP-SMA connector on the end, often used for wifi routers and antennas
- GPS and cellular connections often use SMA
